

MOHAMED ABDUL KAIYOOM

CYBERSECURITY ENGINEER | SOC OPERATIONS | INCIDENT RESPONSE | THREAT DETECTION

Bengaluru, India | +91 7305486478 | mohamedabdulkaiyoom880@gmail.com

Portfolio: abdulkaiyoom500.github.io/portfolio-site

PROFESSIONAL SUMMARY

Cybersecurity Engineer with around 5 years of experience in SOC operations, incident investigation, threat monitoring, vulnerability management, and security validation for enterprise applications. Hands-on with Splunk, Wazuh, Rapid7, Wireshark, IOC analysis, Windows/Linux security, and scripting for repetitive analyst tasks. Practical experience in digital forensics, attack/defence labs, and incident documentation.

CORE TECHNICAL SKILLS

SOC & Incident Response: Alert triage, incident investigation, threat hunting, phishing/malware analysis, IOC/TTP analysis, root-cause analysis

SIEM / Security Monitoring: Splunk, Wazuh, Rapid7 InsightIDR, log correlation, alert tuning, endpoint and network telemetry

Detection & Threat Intelligence: SPL, MITRE ATT&CK, Sigma, YARA, VirusTotal, AbuseIPDB, IOC enrichment and tracking

Vulnerability & Application Security: Rapid7 InsightVM, CVE/CVSS, remediation validation, OWASP Top 10, web/API security fundamentals

Network / OS / Scripting: TCP/IP, DNS, HTTP/S, Wireshark, Snort, Windows, Ubuntu, Kali Linux, Python, PowerShell, Bash, Java

Digital Forensics: FTK Imager, Autopsy, Cellebrite, ExifTool, evidence acquisition, hashing, timeline analysis, NIST-aligned documentation basics

Market-aligned EDR / XDR & Cloud Security Exposure: Microsoft Sentinel, KQL, Microsoft Defender XDR, Entra ID, Defender for Cloud, CrowdStrike Falcon, AWS IAM, GuardDuty, Security Hub, CloudTrail

PROFESSIONAL EXPERIENCE

Cybersecurity Engineer | Cenit Technologies

Sep 2023 - Present

Bengaluru, India

Project: Enterprise SOC Monitoring, Incident Response & Threat Hunting

Tech Stack: Splunk, Wazuh, Rapid7 InsightIDR, VirusTotal, AbuseIPDB, Wireshark, MITRE ATT&CK, Windows/Linux, Python, PowerShell

- Monitor and triage alerts from endpoint, server, identity, network, and application logs; confirm the affected asset, severity, and business context before escalation.
- Investigate suspicious logins, brute-force activity, unusual PowerShell execution, malware indicators, privilege changes, and unexpected outbound connections using SIEM searches and endpoint telemetry.
- Correlate events across multiple log sources, enrich IPs/domains/hashes with threat-intelligence sources, and build a clear incident timeline for investigation and handover.
- Tune search logic and alert conditions after reviewing false positives, and map recurring detections to relevant MITRE ATT&CK techniques for consistent analyst handling.
- Work with infrastructure and application teams on containment and recovery actions such as account disablement, endpoint isolation, IOC blocking, and post-remediation validation.
- Maintain investigation notes, evidence, IOCs, actions taken, and closure details so incidents can be reviewed later for audit, RCA, or repeat-pattern analysis.
- Use Python, PowerShell, and Bash for small utilities such as log parsing, IOC lookups, and repetitive validation tasks used during daily SOC investigations.

Project: Vulnerability Management & Security Hardening

Tech Stack: Rapid7 InsightVM, CVE/CVSS, Windows, Linux, Jira, remediation tracking

- Review vulnerability scan findings, validate likely false positives, and separate exploitable or business-relevant issues from low-risk scanner noise.
- Prioritize remediation using CVSS, exploitability, internet exposure, asset criticality, and the impact of the affected service rather than relying only on scanner severity.
- Coordinate with system and application owners on patching, configuration changes, and removal of unnecessary services or access; retest fixes before closure.
- Track recurring and aged vulnerabilities, document remediation guidance, and highlight repeat findings that need a broader hardening or configuration change.
- Support Windows and Linux hardening reviews by checking exposed services, weak configurations, patch status, and other findings identified during assessment.

Project: Security Monitoring for Enterprise Applications

Tech Stack: Application/API logs, Wireshark, JSON, Jira, Windows/Linux, Java

- Reviewed application, API, and backend logs for authentication failures, abnormal request patterns, unexpected errors, and data-handling issues that required security or engineering investigation.
- Correlated application and server events with network traffic to narrow down suspicious behaviour and provide developers with evidence instead of only reporting the visible symptom.
- Used Wireshark for packet-level troubleshooting of unusual connections, DNS behaviour, protocol issues, and traffic patterns observed during incident or defect analysis.
- Validated access-control and data-handling behaviour for workflows involving user and financial information and raised defects when actual behaviour differed from security expectations.
- Documented findings in Jira, retested fixes with development/infrastructure teams, and maintained technical evidence for traceability and release decisions.
- Contributed to root-cause discussions by comparing application logs, backend responses, and affected user flows before confirming whether an issue was code, configuration, or environment related.

Project: Web & API Security Validation

Tech Stack: OWASP Top 10, JSON, Java, JUnit, Mockito, Jira

- Performed security-focused validation of web and API workflows covering authentication, authorization, session behaviour, input validation, error handling, and negative scenarios.
- Reviewed JSON request/response data and backend logs to confirm sensitive information was handled as expected and to identify inconsistent or insecure application behaviour.
- Validated fixes for security-related defects and regression issues and supported unit-level checks with JUnit and Mockito where they were part of the application codebase.
- Worked with developers to reproduce issues with clear evidence, explain the user/security impact, and retest the corrected behaviour before closure.

EDUCATION

B.E. Electronics and Communication Engineering

Anna University (KCG), India
Jun 2017 - Aug 2021

CERTIFICATIONS

- ISC2 Certified in Cybersecurity (CC)
- Cisco Ethical Hacker
- Cisco Junior Cybersecurity Analyst
- Fortinet Certified Fundamentals (NSE 1)
- Cyber Threat Intelligence 101 - ArcX
- Rapid7 Platform Certifications - InsightVM & InsightIDR
